Tower Docks Designer Series

Tower Docks are the ultimate in dock designs. Suitable for many of the same conditions as a Pole Dock, a Tower Dock has the added benefit of lifting out of the water like a drawbridge at the end of the season. No more getting wet with the annual install and pull out! The tower component is built right into the frame so there are no heavy components to store away, and the tower folds underneath the decking in the summer leaving your dock clean and ready for use.

The length of your tower dock is typically based on the water depth. How far out do you need to go to be in deep enough water to dock your boat or to swim? Tower docks are available in 20', 30', 40' & 50' lengths. Additional length can be added as a standard removable pole dock. Widths include 4', 6' & 8'. Wider docks are more stable in deeper water and also more comfortable to use.
